

# Mop System Instructions

- 1** Mix water and chemical in a clean, empty bucket according to chemical label instructions. If making a rinse water bucket, simply pour water into a clean, empty bucket. Use 0.50 gallons of water or solution for every 5 mops.
- 2** Place mops in bucket (5 for 0.50 gallons, 10 for 1.0 gallons, etc.) and make sure all mops get an even amount of saturation.
  - (a)** You can place the sealing lid on and flip the bucket over for 10 minutes to spread the chemical solution evenly on all mops.
- 3** Install a mop from the bucket and begin cleaning 400 – 500 sq. ft. per mop.
- 4** When finished with each mop, dispose for laundering. Do not put dirty mops back into the clean mop bucket.
- 5** Repeat step 3 as needed until all areas have been cleaned.
